

# LASALLE ROAD HEAD-OUT ANGLED PARKING

A safer, more accessible parking experience

## HOW DOES IT WORK?

- 1 Signal a right turn to other drivers**  
*Just like parallel parking*
- 2 Pull past the parking spot and stop**  
*Just like parallel parking*
- 3 Reverse into the parking spot in just one move**  
*Half the effort of parallel parking*

## ADVANTAGES

**GREATER FIELD OF VISION** than traditional back out angled parking

**EASIER THAN PARALLEL PARKING**

**SAFE THAN TRADITIONAL BACK OUT ANGLED PARKING** — since a driver does not back out blindly into traffic, **FEWER ACCIDENTS** can be expected

**SAFER LOADING and UNLOADING** of children and cargo—all side of the vehicle are shielded from oncoming traffic

**MORE PARKING SPACES** than parallel parking because less curb space is used

**EASIER** for larger vehicles to park in angled spaces than parallel parking

**IMPROVED HANDICAPPED PARKING** because spaces can be placed adjacent to curb ramps

**SAFER FOR CYCLISTS**
